**Hiring Team**

CarePay

Nairobi, Kenya

**Re: Application for Data Generalist – Nairobi (Hybrid)**

Dear Hiring Team,

I'm excited to apply for the **Data Generalist** position at CarePay. With over 8 years of experience spanning data engineering, MEL systems, and healthtech analytics across East Africa, I bring a unique balance of backend fluency, end-to-end delivery, and real-world impact — all of which I'm eager to apply in CarePay's mission to transform health insurance operations through technology.

In my current role with Georgetown University's East Africa programs, I lead the design and implementation of secure, API-based data pipelines and microservices — primarily in Python and FastAPI — to support regional health monitoring. I've orchestrated ETL processes with Airflow, developed production dashboards using Power BI, and built backend analytics tools used by field teams and policymakers. Earlier roles with KEMRI and VLIR-UOS strengthened my experience in dimensional data modeling, system migration, and stakeholder collaboration, often across borders and time zones.

What draws me to CarePay is your focus on **digitizing healthcare payments and empowering members through transparency**. That resonates with the impact I've pursued throughout my career — combining *data infrastructure with human-centered outcomes*. Your hybrid, autonomous team culture also aligns with how I work best: hands-on, collaborative, and always learning.

I'm confident that my technical strengths in Python, SQL, dbt, and cloud tools (AWS, Terraform), along with my experience in deploying ML models and managing analytics pipelines, will enable me to contribute immediately and grow with your team.

Thank you for considering my application. I would welcome the opportunity to discuss how I can help CarePay continue driving innovation in health insurance.

Warm regards,

**Nichodemus Werre Amollo**
