Catherine Koech
Research Manager
Georgetown University Regional Data Hub
Nairobi, Kenya

To Whom It May Concern,

I am pleased to support the application of Mr Nichodemus Were Amollo for the ISEP Postgraduate Training Fellowship in Medical Statistics. I work closely with Nichodemus in my role as Research Manager at the Georgetown University Regional Data Hub, where he serves as Lead Medical Statistician and Research Data Analyst.

Nichodemus brings strong analytical discipline to our projects. He approaches data with careful thought, always questioning assumptions and ensuring that statistical methods align with study objectives. In our multi country health research work, he has independently handled complex datasets, conducted regression and survival analyses, and contributed meaningfully to interpretation of findings.

What stands out most is his consistency. He manages multiple responsibilities across countries while maintaining high standards of accuracy and documentation. Deadlines are met without compromising quality. He communicates statistical concepts clearly to colleagues who do not have technical backgrounds, which has strengthened collaboration across teams.

Nichodemus is deeply motivated to grow as an applied medical statistician. He actively seeks opportunities to refine his methodological skills and engages thoughtfully in technical discussions. His commitment to strengthening statistical capacity in African research institutions is evident in both his professional work and mentorship of junior analysts.

I am confident that advanced training at LSHTM will significantly enhance his contribution to health research in the region. He has the discipline, intellectual curiosity, and professional integrity required to benefit from and contribute to the ISEP programme.

Sincerely,
Catherine Koech
